

## TECHNICAL BULLETIN

### JMC Motorcycle Chain Spray - top-synthetic -

#### **Application:**

JMC Motorcycle Chain Spray is a transparent lubricating and anticorrosive agent for driving chains on two-wheel vehicles of any kind, in particular motorbike chains with high velocity.

#### **Description and properties:**

Due to its low viscosity and good wetting characteristics, JMC Motorcycle Chain Spray penetrates all lubricating points. Once the solvent has evaporated, a non-dripping, transparent, water and pressure-resistant lubricating film remains. Special additives reduce friction and wear. Prevents corrosion dependably. JMC Motorcycle Chain Spray is suitable for O-, X- and Z-rings.

#### **How to use:**

Shake JMC Motorcycle Chain Spray well. Carefully clean the chain using a volatile solvent (such as brake cleaner) and dry. Do not use cold cleaner! Spray the chain sparsely and uniformly while turning the rear wheel slowly. Depending on the ambient temperature, wait between 10 and 20 minutes before starting the vehicle. Clean and lubricate the chain at the intervals recommended by the vehicle manufacturer.

#### **Attention:**

Do not spray JMC Motorcycle Chain Spray on tyres.

#### **Technical data:**

Density at 20 °C:                      0.795 g/cm<sup>3</sup>

#### **Note:**

Please follow also the instructions on the packaging label and in the MSDS.
